FOREWORD

A separate volume for Delhi was published for the first time in 1931 and the procedure is repeated on this occasion. It is not however possible to give anything in the nature of a report or discussion of the figures since the officer who did the enumeration handed over charge early in June 1941 and the Census Commissioner for India passed to other heavy duties with effect from mid-July.

While Mr. Fazl-i-Ilahi did the enumeration, tabulation, for reasons indicated below, was carried out in the Census Commissioner's office.

Tabulation for Delhi is characterised by two important differences from the rest of British India. It covers the whole list of tables and its record has been produced on machines. This is the first case in India where machines have been used and the operation was carried out not on specially made or hired machines but on the spare time of equipment being worked in other departments of the Government of India. This innovation is discussed in full elsewhere.

Thus the record is in a permanent form in the shape of cards which can pass through sorting machines, already in use in government offices in Delhi, at any time for the extraction of further details.

Till 1931 information on industry was produced through a quite separate enquiry on different forms. In 1931 it was decided to see whether this information could not be more conveniently and cheaply procured through the ordinary census questionnaire. Truncated tabulation in that year omitted treatment of industry. The experiment was repeated in 1941 on the simplest possible form of question. A comparison with the returns of the Director of Industries, Delhi however shows that the results from the census question differ so widely as to make it clear that the enquiry has not covered the ground. Specialised information of this kind is probably not procurable from the workers' end and the conclusion seems to emerge that industrial information of the type contemplated must be procured through employers and a special enquiry.

M. W. M. YEATTS,
Census Commissioner for India.

I-- AREA, HOUSES AND POPULATION

The areas in column 2 are those of the latest determinations of the Survey Department. The difference of 1 sq. mile from the last census is due to recalculation.

2. A house was defined at this census as the dwelling place of a commensal family. "Occupied house" means a census house.

3. "Towns" include municipalities, civil lines not included in municipal limits, cantonments and other places of usually not less than 5,000 inhabitants and possessing distinct urban characteristics. "Village" means a revenue village. "Urban" and "rural" refer to persons living in towns or villages as above defined.

4. The urban/rural ratio when towns with a population of 5,000 or over is taken as urban is 3 : 1.

5. There is only one tehsil in the province, hence Provincial Tables I and II have not been prepared.

VIII—MEANS OF LIVELIHOOD

Figures are given for Delhi Municipality also.

2. Subsidiary table (vii) represents the results of a new question in this year's census designed to see whether the census could elicit any information on the extent to which activities are carried on in association, *e.g.* whether a man has either a member of his household or paid assistant working with him. This enquiry did not contemplate the organised association going under the head of industry but the smaller scale which while more than one man shows do not come under the description industry.

The returns in this table are confined to agricultural and industrial occupations and trade.

X-- UNEMPLOYMENT

This table represents an experiment, to see whether the census can provide information on unemployment. An enquiry of this nature demands really much more time and a different agency than the unpaid spare time enumerators who are all we can command. Everything was done however to make the question as readily comprehensible as possible and it formed part of the common questionnaire applied to all.

The figures tabulated refer to actual search for employment, not merely to the absence of a particular occupation.

Twenty-nine women have been returned as unemployed.

REPRODUCTION TABLES

This census saw a great departure in the shape of questions about numbers of children born and surviving and the age of a mother at the birth of her first child. This material ought to be present in the vital statistics and the main object of this year's departure was to bring this point home and also show that the questions could be asked all over India. They were, and one can only hope that they will now find their way to the proper place for them, namely the birth registration system.

SAMPLE TABLES

1. Tables VII, VIII and XIII have been prepared on a random sample basis. The sample was arrived at by taking every fiftieth slip for the province.

2. The percentage composition of the various communities according to Imperial Table XIII and Sample Table XIII is given below:—

								Table XIII	Sample Table XIII
Hindus..	61·8	62·0
Muslims	33·2	33·0
Christians	1·9	1·9
Sikhs	1·8	1·9
Jains	1·2	1·2

The two percentages are practically identical.

3. The percentage distribution among the various age groups according to the Imperial and Sample Tables VII are given below :—

Age group								Table VII	Sample Table VII
0—5	12·0	13·0
5—10	11·1	11·7
10—15	10·0	10·3
15—20	11·1	10·5
20—40	37·9	38·2
40—60	14·8	13·3
60 & over	3·1	3·0

4. Percentages for independent workers and dependents are given below:—

								Table VIII	Sample Table VIII
Independent	35·9	34·6
Partly dependent	2·4	1·9
Total dependent	64·1	65·4
